⁽²⁾ Excepting hardness and special systems

testXpert® not available⁽²⁾

This matrix applies exclusively to electromechanical, static, stand-alone standard testing machines

Zwick can provide the perfect software solution for all active Windows operating systems according to machine electronics

testXpert II - intelligent and reliable

Zwick sets the standards - thanks to over 90 years' experience of materials testing plus the expertise gained from around 20 years of Windows software programming. We build on this experience by continuously developing testXpert II and adapting it to existing market requirements. In the fast-moving world of measurement and testing technology it is vital to 'stay on the ball'. In addition to their optimum scope and performance, the latest versions of testXpert II offer an assurance of compatibility with existing operating systems; this applies to both 32-bit and 64-bit versions. Only with up-to-date, future-upgradeable operating systems can optimum communication between hardware and user software be ensured.

End of Microsoft support for Windows XP, Vista and 7 - how compatible is your software?

On 8 April 2014, Microsoft officially ended support for its Windows XP operating system. On April 11, 2017, support for the Windows Vista operating system was also ended. Starting January 14, 2020, extended support for Windows 7 will also end. Microsoft has drawn attention to the consequences associated with termination of support. These include:

- No security updates
- No bug fixes
- Security and compatibility risks
- Downtime

Support resources are no longer available from Microsoft. (source: www.microsoft.com)

Zwick has the right solution for every situation and is well-equipped to assist you in switching to the latest technology. Contact us. We look forward to discussing your needs.

Product Information

testXpert II Updates and Upgrades

Update

Do you already have testXpert II and would now like to have the latest version? A version update opens up new possibilities regarding key functions, integration of new standards, compatibility with new operating systems and much more.

Upgrade

Do you have a testing system which operates with testXpert and would now like to upgrade to testXpert II? Following upgrading, testing machines equipped with testControl electronics have access to all the options offered by the latest versions of testXpert II testing software. For machines with DUPS/MOPS electronics a 'frozen' version of testXpert II (V3.31) is available. Our experienced software engineers will be happy to assist you during the changeover. They can also help with optimization of your test programs.

Retrofits

Do you have new, additional testing requirements? Or do you need extra testXpert II options? Over 600 Standard test programs are fully matched to the test standards on which they are based. Users can begin standard-compliant testing immediately. Would you like to have freely configurable test sequences? testXpert II has a Master test program already prepared for each type of test.

Powerful options such as the Results Editor or the Upload/Download option provide focused expansion of testXpert II's capabilities.

Other software products, both industry-specific and research and academia-oriented, are available.

Modernization

Would you like to use testXpert II, but your testing machine is still equipped with earlier measurement and control electronics? testXpert II testing software only achieves its full potential if used in conjunction with modern testControl or testControl II electronics. In such cases we recommend modernization of your testing machine to ensure continued service reliability and future-upgradability.

Customized software adaptations

Do you have special new testing software requirements? Our specialists will be happy to help you implement them. Why not take advantage of our software engineers' years of experience in implementing customer-specific (not to mention industry-specific) solutions? They will help you to use the testing software to best advantage. Customized solutions often result in significant gains in profitability during subsequent testing operations.

Examples of software services include:

- creating or adapting test programs according to individual customer specifications
- database-supported management of test programs
- connection to HOST systems (databases, ERP systems)

For enquiries regarding these services please contact supportdesk@zwick.de

Further information on testXpert II is available on our website at www.zwick.de or in our testXpert II brochure.
